# Demo Sphinx-SimplePDF

This PDF contains examples and test-data for different documentation and layout elements.

Some of them are testing corner cases (e.g. a huge table), for which the PDF format is not the ideal one and therefore their representation is not perfect or even buggy.

## Inline Markup

Paragraphs contain text and may contain inline markup: *emphasis* , **strong emphasis** , `inline literals` , standalone hyperlinks ( <http://www.python.org> ), external hyperlinks ( [Python \[ 5 \]](#) ), internal cross-references ( [example](#) ), external hyperlinks with embedded URIs ( [Python web site](#) ), footnote references (manually numbered [ 1 ] , anonymous auto-numbered [ 3 ] , labeled auto-numbered [ 2 ] , or symbolic [ \* ] ), citation references ( [ 12 ] ), substitution references ( [☰](#) ), and inline hyperlink targets (see [Targets](#) below for a reference back to here). Character-level inline markup is also possible (although exceedingly ugly!) in *re Structured Text* . Problems are indicated by `|problematic|` text (generated by processing errors; this one is intentional).

Also with `sphinx.ext.autodoc` , which I use in the demo, I can link to `test_py_module.test.Foo` . It will link you right to my code documentation for it.

The default role for interpreted text is *Title Reference*. Here are some explicit interpreted text roles: a PEP reference ( [PEP 287](#) ); an RFC reference ( [RFC 2822](#) ); a subscript; a superscript; and explicit roles for *standard inline markup*.

GUI labels are a useful way to indicate that some action is to be taken by the user. The GUI label should not run over `line-height` so as not to interfere with text from adjacent lines.

Key-bindings indicate that the reader is to press a button on the keyboard or mouse, for example `MMB` and `Shift - MMB`. Another useful markup to indicate a user action is to use `menuselection` this can be used to show short and long menus in software. For example, and `menuselection` can be seen here that breaks is too long to fit on this line. My ▶ Software ▶ Some menu ▶ Some sub menu 1 ▶ sub menu 2.

Let's test wrapping and whitespace significance in inline literals:

```
This is an example of --inline-literal --text, --including some-- strangely--hyphenated-words. A
how the text is wrapped. -- ---- ----- Now note the spacing between the words o
grouped in pairs).
```

If the `--pep-references` option was supplied, there should be a live link to PEP 258 here.

Very long URLs should be wrapped so lines do not overflow and cause horizontal scrolling:

<https://www.google.com/search?hl=en&q=very%20long%20url%20example%20of%20a%20url%20that%20is%20extremely%20long%20you%20pr>

## Math

This is a test. Here is an equation:  $(X_{0:5} = (X_0, X_1, X_2, X_3, X_4))$ . Here is another:

(1) 
$$\nabla^2 f = \frac{1}{r^2} \frac{\partial}{\partial r} \left( r^2 \frac{\partial f}{\partial r} \right) + \frac{1}{r^2 \sin \theta} \frac{\partial f}{\partial \theta} \left( \sin \theta, \frac{\partial f}{\partial \theta} \right) + \frac{1}{r^2 \sin^2 \theta} \frac{\partial^2 f}{\partial \phi^2}$$

You can add a link to equations like the one above (1) by using `:eq:`.

## Meta

## Blocks

### Literal Blocks

Literal blocks are indicated with a double-colon (":") at the end of the preceding paragraph (over there `-->`). They can be indented:

```
if literal_block:
    text = 'is left as-is'
    spaces_and_linebreaks = 'are preserved'
    markup_processing = None
```

Or they can be quoted without indentation:

```
>> Great idea!
>
> Why didn't I think of that?
```

## Line Blocks

This is a line block. It ends with a blank line.

Each new line begins with a vertical bar (“|”).

Line breaks and initial indents are preserved.

Continuation lines are wrapped portions of long lines; they begin with a space in place of the vertical bar.

The left edge of a continuation line need not be aligned with the left edge of the text above it.

This is a second line block.

Blank lines are permitted internally, but they must begin with a “|”.

Take it away, Eric the Orchestra Leader!

```
| A one, two, a one two three four
```

```
| Half a bee, philosophically,
| must, ipso facto , half not be.
| But half the bee has got to be,
| vis a vis its entity. D'you see?
```

```
| But can a bee be said to be
| or not to be an entire bee,
| when half the bee is not a bee,
| due to some ancient injury?
```

```
| Singing...
```

## Block Quotes

Block quotes consist of indented body elements:

My theory by A. Elk. Brackets Miss, brackets. This theory goes as follows and begins now. All brontosaurus are thin at one end, much much thicker in the middle and then thin again at the far end. That is my theory, it is mine, and belongs to me and I own it, and what it is too.

—Anne Elk (Miss)

## Doctest Blocks

```
>>> print 'Python-specific usage examples; begun with ">>>"'
Python-specific usage examples; begun with ">>>"
>>> print '(cut and pasted from interactive Python sessions)'
(cut and pasted from interactive Python sessions)
```

## Code Blocks

```
# parsed-literal test
curl -O http://someurl/release-1.0.tar-gz
```

Code Blocks can have captions.

```
{
  "windows": [
    {
      "panes": [
        {
          "shell_command": [
            "echo 'did you know'",
            "echo 'you can inline'"
          ]
        },
        {
          "shell_command": "echo 'single commands'"
        },
        "echo 'for panes'"
      ],
      "window_name": "long form"
    }
  ],
}
```

```
"session_name": "shorthands"  
}
```

## Emphasized lines with line numbers

```
1 def some_function():  
2     interesting = False  
3     print 'This line is highlighted.'  
4     print 'This one is not...'  
5     print '...but this one is.'
```

## Sidebar

Ch'ien / The Creative

*Above* CH'IEN THE CREATIVE, HEAVEN

*Below* CH'IEN THE CREATIVE, HEAVEN

The first hexagram is made up of six unbroken lines. These unbroken lines stand for the primal power, which is light-giving, active, strong, and of the spirit. The hexagram is consistently strong in character, and since it is without weakness, its essence is power or energy. Its image is heaven. Its energy is represented as unrestricted by any fixed conditions in space and is therefore conceived of as motion. Time is regarded as the basis of this motion. Thus the hexagram includes also the power of time and the power of persisting in time, that is, duration.

The power represented by the hexagram is to be interpreted in a dual sense in terms of its action on the universe and of its action on the world of men. In relation to the universe, the hexagram expresses the strong, creative action of the Deity. In relation to the human world, it denotes the creative action of the holy man or sage, of the ruler or leader of men, who through his power awakens and develops their higher nature.

## Code with Sidebar

A code example

With a sidebar on the right.

Literal includes can also have captions.

```
1 # -*- coding: utf-8 -*-
2 """Test Module for sphinx_rtd_theme."""
3
4
5 class Foo:
6
7     """Docstring for class Foo.
8
9     This text tests for the formatting of docstrings generated
10    from output
11    ``sphinx.ext.autodoc``. Which contain reST, but sphinx nests
12    it in the
13    ``<dl>``, and ``<dt>`` tags. Also, ``<tt>`` is used for
14    class, method names
15    and etc, but those will *always* have the ``.descname`` or
16    ``.descclassname`` class.
17
18    Term
19        It is also possible to include definitions inside
20    docstrings.
21        They should be styled as a normal definition list.
22
23    :Field List:
24        It is also possible to include definitions inside
25    docstrings.
26        They should be styled as a normal definition list.
27
28    .. [1] A footnote contains body elements, consistently
29    indented by at
30        least 3 spaces.
31
32    .. [Citation] A citation contains body elements, consistently
33    indented by at
34        least 3 spaces.
35
36    Normal ``<tt>`` (like the <tt> I just wrote here) needs to be
37    shown with
38    the same style as anything else with ````this type of
39    markup````.
40
41    It's common for programmers to give a code example inside of
42    their
```

```
33     docstring::
34
35         from test_py_module import Foo
36
37         myclass = Foo()
38         myclass.dothismethod('with this argument')
39         myclass.flush()
40
```

## References

### Footnotes

[ 1 ] ( 1 , 2 )

A footnote contains body elements, consistently indented by at least 3 spaces.

This is the footnote's second paragraph.

[ 2 ] ( 1 , 2 )

Footnotes may be numbered, either manually (as in [ 1 ] ) or automatically using a “#”-prefixed label. This footnote has a label so it can be referred to from multiple places, both as a footnote reference ( [ 2 ] ) and as a hyperlink reference ( [label](#) ).

[ 3 ]

This footnote is numbered automatically and anonymously using a label of “#” only.

[ \* ]

Footnotes may also use symbols, specified with a “\*” label. Here's a reference to the next footnote: [\[ † \]](#).

[ † ]

This footnote shows the next symbol in the sequence.

[ 4 ]

Here's an unreferenced footnote, with a reference to a nonexistent footnote: [\[5\]](#)\_ .

### Citations

[ Citation ]

This is the citation I made, let's make this extremely long so that we can tell that it doesn't follow the normal responsive table stuff.

[ 12 ]

This citation has some `code blocks` in it, maybe some **bold** and *italics* too. Heck, lets put a link to a meta citation [ 13 ] too.

[ 13 ]

This citation will have two backlinks.

Here's a reference to the above, [Citation] , and a [nonexistent] citation.

## Glossary

This is a glossary with definition terms for thing like [Writing](#) :

### Documentation

Provides users with the knowledge they need to use something.

### Reading

The process of taking information into ones mind through the use of eyes.

### Writing

The process of putting thoughts into a medium for other people to [read](#) .

## Targets

This paragraph is pointed to by the explicit "example" target. A reference can be found under [Inline Markup](#) , above. [Inline hyperlink targets](#) are also possible.

Section headers are implicit targets, referred to by name. See [Targets](#) , which is a subsection of [References](#) .

Explicit external targets are interpolated into references such as " [Python \[ 5 \]](#) ".

Targets may be indirect and anonymous. Thus [this phrase](#) may also refer to the [Targets](#) section.

Here's a ``hyperlink reference without a target`_` , which generates an error.

## Directives

### Contents

These are just a sample of the many reStructuredText Directives. For others, please see: <http://docutils.sourceforge.net/docs/ref/rst/directives.html> .

## Centered text

You can create a statement with centered text with `.. centered::`

This is centered text!

## Images & Figures

### Images

An image directive (also clickable – a hyperlink reference):

### Figures

A figure is an image with a caption and/or a legend:

re	Revised, revisited, based on 're' module.
----	---

Structured

Structure-enhanced text, structuredtext.

Text Well it is, isn't it?

This paragraph is also part of the legend.

A figure directive with center alignment

This caption should be centered.

## Admonitions

### ⚠ Attention

Directives at large.

### ⚠ Caution

Don't take any wooden nickels.

### ☢ Danger

Mad scientist at work!

### ☢ Error

Does not compute.

**i Hint**

It's bigger than a bread box.

**i Important**

- Wash behind your ears.
- Clean up your room.
  - Including the closet.
  - The bathroom too.
    - Take the trash out of the bathroom.
    - Clean the sink.
- Call your mother.
- Back up your data.

**i Note**

This is a note. Equations within a note:  $(G_{\mu\nu} = 8 \pi G (T_{\mu\nu} + \rho_{\Lambda} g_{\mu\nu}))$ .

**i Tip**

15% if the service is good.

**Example**

Thing1

**Example**

Thing2

Thing3

**⚠ Warning**

Strong prose may provoke extreme mental exertion. Reader discretion is strongly advised.

**📌 And, by the way...**

You can make up your own admonition too.

## Topics, Sidebars, and Rubrics

Sidebar Title

Optional Subtitle

This is a sidebar. It is for text outside the flow of the main text.

This is a rubric inside a sidebar

Sidebars often appears beside the main text with a border and background color.

Topic Title

This is a topic.

This is a rubric

## Target Footnotes

[ 5 ] ( 1 , 2 , 3 )

<http://www.python.org/>

## Replacement Text

I recommend you try *Python*, *the* best language around [ 5 ].

## Compound Paragraph

This paragraph contains a literal block:

```
Connecting... OK  
Transmitting data... OK  
Disconnecting... OK
```

and thus consists of a simple paragraph, a literal block, and another simple paragraph. Nonetheless it is semantically *one* paragraph.

This construct is called a *compound paragraph* and can be produced with the “compound” directive.

## Download Links

This long long long long long long long long long long long long long long long long download link should be blue, normal weight text and should wrap white-spaces

# Lists & Tables

## Table of Contents

---

<b>Lists &amp; Tables</b>	<b>23</b>
● Lists	24
● Enumerated Lists	24
● Definition Lists	24

---

- Tables with paragraphs

34

## Lists

### Enumerated Lists

1. Arabic numerals.

1. lower alpha)

1. (lower roman)

1. upper alpha.

1. upper roman)

2. Lists that don't start at 1:

1. Three

2. Four

1. C

2. D

1. iii

2. iv

3. List items may also be auto-enumerated.

### Definition Lists

#### **Term**

Definition

#### **Term classifier**

Definition paragraph 1.

Definition paragraph 2.

#### **Term**

Definition

I have no clue why the definition list below is classified as a different style of definition list than the one above.

### Is it the spaces in the term?

Maybe it was the multiple line paragraph in the line below that caused this?

### Is it the paragraph above the list maybe?

I guess a lot of these lists don't have leading paragraphs?

### Is it everything all at once?

Who knows?!

## Option Lists

For listing command-line options:

<b>-a</b>	command-line option "a"
<b>-b file</b>	options can have arguments and long descriptions
<b>--long</b>	options can be long also
<b>--input= file</b>	long options can also have arguments
<b>--very-long-option</b>	The description can also start on the next line.  The description may contain multiple body elements, regardless of where it starts.
<b>-x , -y , -z</b>	Multiple options are an "option group".
<b>-v , --verbose</b>	Commonly-seen: short & long options.
<b>-l file , --one= file , --two file</b>	Multiple options with arguments.
<b>/V</b>	DOS/VMS-style options too

There must be at least two spaces between the option and the description.

Like this.

**Dedication :** For Docutils users & co-developers.

**abstract :** This document is a demonstration of the reStructuredText markup language, containing examples of all basic reStructuredText constructs and many advanced constructs.

## Bullet Lists

### Simple

- A simple list.
- There are no margins between list items.
- Simple lists do not contain multiple paragraphs. That's a complex list.
- In the case of a nested list
  - There are no margins between elements
    - Still no margins
      - Still no margins

### Complex

- A bullet list
  - Nested bullet list.
  - Nested item 2.
- Item 2.

Paragraph 2 of item 2.

- Nested bullet list.
- Nested item 2.
  - Third level.
  - Item 2.
- Nested item 3.
- `inline literall`
- `inline literall`
- `inline literall`
- This item has multiple paragraphs.

This item has multiple paragraphs.

- This item has multiple paragraphs.

This item has multiple paragraphs.

## Second list level

- here is a list in a second-level section.

- yahoo

- yahoo

- yahoo

- here is an inner bullet oh

- one more with an inline literally .yahoo

heh heh. child. try to beat this embed:

```
1 # -*- coding: utf-8 -*-
2 """Test Module for sphinx_rtd_theme."""
3
4
5 class Foo:
6
7     """Docstring for class Foo.
8
9     This text tests for the formatting of docstrings
10    generated from output
11    ``sphinx.ext.autodoc``. Which contain reST, but sphinx
12    nests it in the
```

- and another. yahoo

- yahoo

- hi

- how about an admonition?

### Note

This is a note nested in a list.

- and hehe

## But deeper down the rabbit hole

- I kept saying that, “deeper down the rabbit hole”. yahoo
  - I cackle at night yahoo .
- I’m so lonely here in GZ `guangzhou`
- A man of python destiny, hopes and dreams. yahoo
  - yahoo
    - yahoo `hi`
    - `destiny`

## Hlists

First item	Forth item
Second item	Fifth item
Third item	Sixths item

Hlist with images

This is a short caption for a figure.

This is a long caption for a figure. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec porttitor dolor in odio posuere, vitae ornare libero mattis. In lobortis justo vestibulum nibh aliquet, non.

## Numbered List

1. One,
2. Two.
3. Three with long text. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed feugiat sagittis neque quis eleifend. Duis rutrum lectus sit amet mattis suscipit.
  - 1. Using bullets and letters. (A)
  - 1. Using bullets and letters. (B)
  - 1. Using bullets and letters. (C)

## Tables

### Grid Tables

Here's a grid table followed by a simple table:

Header row, column 1 (header rows optional)	Header 2	Header 3	Header 4
body row 1, column 1	column 2	column 3	column 4
body row 2	Cells may span columns.		
body row 3	Cells may span rows.	<ul style="list-style-type: none"> <li>• Table cells</li> </ul>	
body row 4	<ul style="list-style-type: none"> <li>• contain</li> <li>• body elements.</li> </ul>		
body row 5	Cells may also be empty: -->		

Inputs		Output
A	B	A or B
False	False	False
True	False	True
False	True	True
True	True	True

## Giant Tables

Header 1	Header 2	Header 3	Header 1	Header 2	Header 3	Header 1	Header 2	Header 3	Header 1
body row 1	column 2	column 3	body row 1	column 2	column 3	body row 1	column 2	column 3	body row 1
body row 1	column 2	column 3	body row 1	column 2	column 3	body row 1	column 2	column 3	body row 1
body row 1	column 2	column 3	body row 1	column 2	column 3	body row 1	column 2	column 3	body row 1
body row 1	column 2	column 3	body row 1	column 2	column 3	body row 1	column 2	column 3	body row 1

## List Tables

List tables can have captions like this one.

List table	Header 1	Header 2	Header 3 long. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nam sit amet mauris arcu.
<b>Stub Row 1</b>	Row 1	Column 2	Column 3 long. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nam sit amet mauris arcu.
<b>Stub Row 2</b>	Row 2	Column 2	Column 3 long. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nam sit amet mauris arcu.
<b>Stub Row 3</b>	Row 3	Column 2	Column 3 long. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nam sit amet mauris arcu.

This is a list table with images in it.

This is a short caption for a figure.

This is a long caption for a figure. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec porttitor dolor in odio posuere, vitae ornare libero mattis. In lobortis justo vestibulum nibh aliquet, non.

## Tables with paragraphs

Test to see that tables behave well with nested paragraphs.

Precedence	Operator	Description
1	::	Scope resolution
2	()	Function call
	[]	Subscript
	.	Member access
	.{ }	Bit-field concatenation

# API documentation and generated content

Table of Contents

---

API documentation and generated content	35
● <code>test_py_module</code>	35
● C++ API	38
● JavaScript API	39
● Generated Index	40
● Optional parameter args	40
● Data	41

`test_py_module`

Test Module for sphinx\_rtd\_theme.

**class** `test_py_module.test.Foo ( qux , spam = False )`

Docstring for class Foo.

This text tests for the formatting of docstrings generated from output `sphinx.ext.autodoc`. Which contain reST, but sphinx nests it in the `<dl>`, and `<dt>` tags. Also, `<tt>` is used for class, method names and etc, but those will *always* have the `.descname` or `.descclassname` class.

## Term

It is also possible to include definitions inside docstrings. They should be styled as a normal definition list.

## Field List :

It is also possible to include definitions inside docstrings.  
They should be styled as a normal definition list.

[ 1 ]

A footnote contains body elements, consistently indented by at least 3 spaces.

[ Citation ]

A citation contains body elements, consistently indented by at least 3 spaces.

Normal `<tt>` (like the `<tt>` I just wrote here) needs to be shown with the same style as anything else with ```this type of markup```.

It's common for programmers to give a code example inside of their docstring:

```
from test_py_module import Foo

myclass = Foo()
myclass.dothismethod('with this argument')
myclass.flush()

print(myclass)
```

Here is a link to `capitalize()`. Here is a link to `__init__()`.

`__init__ ( qux , spam = False )`

Start the Foo.

### Parameters :

- `qux ( string )` – The first argument to initialize class.
- `spam ( bool )` – Spam me yes or no...

### `__weakref__`

list of weak references to the object (if defined)

`add ( val1 , val2 )`

Return the added values.

### Parameters :

- `val1 ( int )` – First number to add.
- `val2 ( int )` – Second number to add.

**Return type :**

int

The parameters of this method are described in the parameter list.

**another\_function ( *a* , *b* , **\*\*kwargs** )**

Here is another function.

**Parameters :**

- **a** ( *int* ) – The number of green hats you own.
- **b** ( *int* ) – The number of non-green hats you own.
- **kwargs** ( *float* ) – Additional keyword arguments. Each keyword parameter should specify the name of your favorite cuisine. The values should be floats, specifying the mean price of your favorite dish in that cooking style.

**Returns :**

A 2-tuple. The first element is the mean price of all dishes across cuisines. The second element is the total number of hats you own:  $(a + b)$ .

**Return type :**

tuple

**Raises :**

**ValueError** – When **a** is not an integer.

New in version 1.0: This was added in 1.0

Changed in version 2.0: This was changed in 2.0

Deprecated since version 3.0: This is deprecated since 3.0

**bar = 1**

Doc comment for class attribute Foo.bar. It can have multiple lines.

**baz = 2**

Docstring for class attribute Foo.baz.

**capitalize ( *myvalue* )**

Return a string as uppercase.

**Parameters :**

*myvalue* ( *string* ) – String to change

**Return type :**

string

**flox = 1.5**

Doc comment for Foo.flox. One line only.

**qux**

Doc comment for instance attribute qux.

**spam**

Docstring for instance attribute spam.

**test\_py\_module.test.add\_numbers ( *a : int* , *b : int = 0* ) → int**

Add two numbers together

**Parameters :**

- **a** – The first number
- **b** – The second number

Here is some more text.

**test\_py\_module.test.subtract\_numbers ( *a : int* , *b : int = 0* ) → int**

Subtract two numbers

**Parameters :**

- **a** – The first number
- **b** – The second number

## C++ API

**type MyType**

Some type

```
const MyType Foo ( const MyType bar )  
    Some function type thing
```

```
template < typename T , std :: size_t N >  
class std :: array  
    Some cpp class
```

```
float Sphinx :: version  
    The description of Sphinx::version.
```

```
int version  
    The description of version.
```

```
typedef std :: vector < int > List  
    The description of List type.
```

```
enum MyEnum  
    An unscoped enum.
```

#### **enumerator A**

```
enum class MyScopedEnum  
    A scoped enum.
```

#### **enumerator B**

```
protected enum struct MyScopedVisibilityEnum : std :: underlying_type < MySpecificEnum > :: type  
    A scoped enum with non-default visibility, and with a specified underlying type.
```

#### **enumerator B**

## JavaScript API

• Link to `ModTopLevel()`

```
class module_a . submodule . ModTopLevel ( )
```

• Link to `mod_child_1()`

• Link to `ModTopLevel.mod_child_1()`

```
ModTopLevel . mod_child_1 ( )
```

• Link to `mod_child_2()`

```
ModTopLevel . mod_child_2 ( )
```

• Link to `module_a.submodule.ModTopLevel.mod_child_1()`

- Link to `ModTopLevel()`

`class` `module_b . submodule . ModNested ( )`

`ModNested . nested_child_1 ( )`

- Link to `nested_child_2()`

`ModNested . nested_child_2 ( )`

- Link to `nested_child_1()`

## Generated Index

Part of the sphinx build process in generate and index file: [Index](#) .

## Optional parameter args

At this point optional parameters [cannot be generated from code](#) . However, some projects will manually do it, like so:

This example comes from [django-payments module docs](#) .

```
class payments.dotpay. DotpayProvider ( seller_id , pin [ , channel=0 [ , lock=False ] , lang='pl' ] )
```

This backend implements payments using a popular Polish gateway, [Dotpay.pl](#) .

Due to API limitations there is no support for transferring purchased items.

### Parameters :

- `seller_id` – Seller ID assigned by Dotpay
- `pin` – PIN assigned by Dotpay
- `channel` – Default payment channel (consult reference guide)
- `lang` – UI language
- `lock` – Whether to disable channels other than the default selected above

## Data
